

## SMVR-800

**Surface Mounted Automatic Vehicle Restraint Systems**

Our Automatic Vehicle Restraint System is designed to ensure safety at all times, minimising the risk of accident and injury during loading processes.

Prevent unplanned movement

The round blocking arm of the MAdoorS SMVR-800 Automatic Vehicle Restraint System traps the vehicles wheel, preventing unplanned vehicle movement during the loading and unloading process. Accidental creep is impossible and vehicles cannot drive off during the process. With a constant restraining force applied throughout the process, it's safety you can rely on.

## New features and benefits

Complete control with combination interlocking , this means that dock doors cannot open before the restraint system is in place , and the blocking arm will only move away from the wheel when the dock door is closed. With this system, operations will only begin when a vehicle is safely docked, and vehicles will never move off before it's safe to do so. Optional sensor prevents damage to mud flaps

This Automatic Vehicle Restraint System is also suitable for vehicles with tail lifts because of the new retractable detection arm. The retractable arm tucks neatly into position alongside the restraint when not in use, preventing damage to truck wheels or tail lifts. With an optional mud flap sensor , potential damage to trucks with long mud flaps is avoided.

## Easy installation

Installing the MAdoorS SMVR-800 Automatic Vehicle Restraint System requires minimal building preparation and it uses limited internal space, with the hydraulic unit being located on the restraint system itself. So for maximum safety at your loading bays, look no further than the MAdoorS SMVR-800 Automatic Vehicle Restraint System.
